SYSTEMATIZED   KNOWLEDGE   ANALYZING   METHOD   AND   DEVICE   THEREFOR,   AND
CLASSIFYING METHOD AND DEVICE THEREFOR

ABSTRACT

PROBLEM TO BE SOLVED: To provide a systematized knowledge analyzing device
and classifying device for extracting a prescribed terminal class suited to
the content of an unclassified document, and relating them even when the
state of structured data is not sufficiently known.
SOLUTION: In a systematized knowledge analyzing device 10, existing
structured data and document information related with this are obtained,
while a keyword extraction processing is operated to a document belonging
to the same terminal class of the structured data, and a feature vector
constituted of a significant word and weight is **generated** by a knowledge
system dictionary preparing part 12, and the feature vector is stored as
the feature of the terminal class with the obtained information in a
classifying system knowledge dictionary 13. At the time of obtaining an
unclassified document, the keyword extraction processing is operated, and
the feature vector is **generated** by an information **abstracting** part 22
of an **automatic** classifying device 20, and the **matching** of the feature
vector with the preliminarily registered feature vector of each terminal
class is operated by an information classifying part 23, and allocation to
the terminal class whose **matching** level is high is operated.

ABSTRACT EDITING DEVICE

ABSTRACT

PROBLEM TO BE SOLVED: To **automatically** edit an **abstract** of high
completeness by judging characteristics of a document to be edited and
editing it in details **matching** with the characteristics.

SOLUTION: A document characteristic judging part 1 judges characteristics
of a document inputted to an **abstract** editing device and an **abstract**

' editing part 2 **genera** an **abstract** of the doc t containing specific words and phrases according to the judged result. Then, a specific word and phrase retrieval part 10 included in the judging part 1 judges whether or not the inputted document includes a specific word or phrase such as 'judicial decision'. Further, an **abstract** editing part 11 edits a document, which includes no specific word or phrase into an **abstract** and a re-editing process judging part 12 judges whether or not the edited **abstract** needs to be re-edited or not by judging a distribution of important sentences including important words of the **abstract** . Consequently, the best **abstract** of the document can **automatically** be edited by **automatically** recognizing characteristics of the document and this device is able to **automatically** edit **abstracts** of the document having different characteristics by itself.

Abstract (Basic): US 6571239 B1
     NOVELTY - A data object corresponding to user's **query** is retrieved from the repository by **search** engine in response to user's **query** . The keyword index is updated to form a modified keyword list which includes associated **query** in keywords linked to retrieved data object.
     DETAILED DESCRIPTION - INDEPENDENT CLAIMS are also included for the following:
     (1) data object **search** apparatus;
     (2) article of manufacture comprising computer usable medium; and
     (3) computer program **product** comprising computer usable medium storing computer readable program code.
     USE - For incrementally updating and modifying keyword index for **searching** data object e.g. document, **abstract** , image pattern in repository.
     ADVANTAGE - Prevents mismatch between the keyword employed by user and the manual or **automatically** assigned keyword, by updating keyword based on user's **query** .
     DESCRIPTION OF DRAWING(S) - The figure shows a flowchart explaining keyword and data object association process.

Patent Details:

Patent No	Kind	Lan	Pg	Main IPC	Filing Notes
US 6185560	B1		21	G06F-017/30	

Abstract (Basic): US 6185560 B1
     NOVELTY - **Automatically generates** virtual tables defining line
patterns by type, based on location and frequency of occurrence in
report and establishes links among those definitions to facilitate data
extraction. Creates a virtual database of structural patterns and
generates virtual records from the virtual database in response to
user **queries** .
     DETAILED DESCRIPTION - Permits fully automated **abstraction** of
patterns used in report based data streams. Enables **abstracting** of
patterns existing as complete text lines in a report. Stipulates each
and every line of data in report must **match** a pattern, and which
addresses exceptions by either **creating** new patterns or modifying an
existing pattern to include the exception.
     Abstracts well defined collection of non-overlapping patterns
from report. Effectively disregards page breaks and non-significant
text blocks in defining patterns.
     USE - End user access for **query** of business information reports.
     ADVANTAGE - Provides an improved report mining information
retrieval system, which permits the data to be accessible for **query**
by ordinary end users, as if the data were in a database, while
retaining the inherent logic of the report design and the look and feel
of the image format of the report.
     DESCRIPTION OF DRAWING(S) - Report mining information retrieval
. system block diagram.
     pp; 21 DwgNo 3C/13

Abstract (Basic): US 5995969 A
    NOVELTY - Computer aided software engineering (CASE) repository
(407) stores information of integrated CASE meta model using entity
relationship model. The CASE repository is connected to meta entity
type and relationship type instance **generator** (403), entity type and
relationship type table **generator** (404), meta entity type and
relationship type **searcher** (405) and entity type and relationship
type **searcher** (406).
    DETAILED DESCRIPTION - An integrated CASE metal model (402)
connected to user interface, models as entities and directional
relationships according to type and meaning of information of
components of integrated CASE tool for processor, using entity
relationship model of conceptual modeling technique. From the
integrated CASE metal model, meta entity type and meta relationship
type instances, and entity type and relationship type tables are
generated by respective **generators** (403,404) connected to user
interface. Based on the **generated** instances and tables, meta entity
type and meta relationship type and entity type and relationship type
are **searched** by respective **searchers** (405,406) connected to user
interface. An INDEPENDENT CLAIM is also included for integrated
supporting method.
    USE - For process methodology used for developing high quality
softwares.
    ADVANTAGE - The repository **automatically** and integratedly manages
information of analysis and design for structured techniques supporting
the software development process, to provide standardization and full
automation of software development process and sharing of information
between the CASE tools.
    DESCRIPTION OF DRAWING(S) - The figure shows architecture of
abstracting system of integrated CASE repository.

Abstract (Basic): US 5963940 A
     NOVELTY - A natural language **query** specifying information to be
retrieved is received and discourse aspects such as temporal or
intention information is determined based on detecting evidence sources
from **query** .
     DETAILED DESCRIPTION - A score for each determined discourse aspect
is **generated** by statistical evidence combination method using
regression formula, and when the score exceeds a threshold score, an
alternate representation of **query** is **generated** . The documents in
the database are processed to tag for discourse aspects. The alternate
representation is **matched** against the database by determining a
measure of relevance for each document and a set of documents
satisfying a retrieval criterion is provided.
     USE - For natural language processing.
     ADVANTAGE - The user is able to interact with the system and refine
systems interpretation. Higher order **abstractions** existing in human
communication above word level are detected. The system **automatically**
sorts, ranks and displays documents relative to **query** of any length
and complexity.
     DESCRIPTION OF DRAWING(S) - The figure shows the block diagram of
document processor.

   Document condensation **method using** automatic **indexing techniques for
   providing** synopsis **of document**
Patent Assignee: DIGITAL EQUIP CORP (DIGI)
Inventor: FLEISCHER R J
Number of Countries: 001 Number of Patents: 001
Patent Family:

Abstract (Basic): US 5960383 A
       NOVELTY - The document is divided into sections which are compared
    with noun phrases. For each **match** , a count is incremented to obtain a
    final score from which the document sections are ranked, stored in
    memory and top sections are identified which are copied from document
    in original order to **produce** a **synopsis** .
       DETAILED DESCRIPTION - Noun phrases are **automatically** extracted
    from document, weightages are assigned and stored in memory. A natural
    language processor, clarit, is used to identify and rank the noun
    phrases. Ranking determines the number of times a noun phrase appears
    within the document as well as the frequency with which the noun phrase
    is typically used in English. The document is divided into sections
    such as lines, sentences, paragraphs or chapters. AN INDEPENDENT CLAIM
    is also included for the apparatus for **automatically** condensing a
    document.
       USE - In text management for providing a **synopsis** of material
    contained in a document to a reader.
       ADVANTAGE - The subject matter of a document as a whole is
    determined more precisely.
       DESCRIPTION OF DRAWING(S) - The figure shows the flow chart of the
    document **condensation** processes.

Patent Family:

Abstract (Basic): JP 11167568 A
       NOVELTY - Sentence is divided into words in a word processing unit
    (2). The character variety currently used for the word is distinguished
    by a discrimination device (4) based on which extract of words is
    performed by a black speck extract unit (3). DETAILED DESCRIPTION -
    INDEPENDENT CLAIMS are also included for the following: recording

medium storing program‌ paragraph processing; docume‌ rocessing
method
USE - For processing document for **automatic abstract production** or **searching** of specific word from predefined sentence.
ADVANTAGE - Recognizes a word correctly by dividing the sentence into words, efficiently. DESCRIPTION OF DRAWING(S) - The figure depicts the block diagram of document processing apparatus. (2) Word processing unit; (3) Black speck extract unit; (4) Character variety discrimination device.

Abstract (Basic): DE 19751955 A1
NOVELTY - The robot is formed by a number of software integrated (IC) circuits. There is an IC controller to control the **abstract** machine and an IC model to describe the **abstract** world of the real machine to be controlled.
DETAILED DESCRIPTION - An IC translator **generates** the language of the **abstract** machine. An IC robot implements actions of an **abstract** robot which depend on events of the IC controller. An IC robot device implements actions of a real robot, which depend on events of the IC controller. An IC switch outputs the actual internal state of the real machine to a display unit.
USE - For laboratory experiments or automation of industrial processes.
ADVANTAGE - Can be **matched** easily to the most different of robots.

Abstract (Basic): US 5913208 A
      NOVELTY - The hit list record pair is **generated** according to the
   documents and selected intrinsic attributes. The intrinsic attributes
   expressed as function of document length etc., of hit list record pair
   are compared to detect duplication of documents.
      DETAILED DESCRIPTION - The attribute fields containing one or more
   attributes of the documents are included in each hit list record. The
   intrinsic attributes that is score expressed as function of document
   length, title, concept, author, publication date and **abstract** is
   selected. The intrinsic attributes are invariant with location and
   replication of document. The function that relates intrinsic attributes
   is probabilistic measurement or cosine similarity measurement. An
   INDEPENDENT CLAIM is also included for computer system.
      USE - In computer networking environment like LAN, WAN, internet.
      ADVANTAGE - Enables identification of duplicate documents from
   search results without comparing content within documents in network.
   Reduces detection cost by avoiding need for access and analysis of
   document content. Facilitates identification of document like book,
   article, report that contains text, image or multimedia information.
      DESCRIPTION OF DRAWING(S) - The figure shows block diagram of
   computer system.

Patent Details:

Patent No	Kind	Lan	Pg	Main IPC	Filing Notes
US 5873056	A		21	G06F-017/30	

Abstract (Basic): US 5873056 A
    NOVELTY – A specific subject code is selected from identical codes
within each sentence, that occur uniquely and at equal to or more than
a certain frequency. Codes for each word is correlated with selected
unique codes. Codes with highest correlation is selected and usage
frequency of the word represented by it, is determined. The codes are
arranged into a weighted vector representing the document content.
    DETAILED DESCRIPTION – Subject codes assigned to each word of a
document express the semantic content of the document and they
correspond to the meaning of each word. INDEPENDENT CLAIMS are included
for the following:
    (a) Natural language processing system;
    (b) Apparatus for **generating** subject field code vector
representation of the document
    USE – for foreign language processing system
    ADVANTAGE – Provides a **query** which shows high similarity to the
representation of the documents since the representations of the
document and the **query** represent the topic at an **abstract** , semantic
field level, thereby making document retrieval more efficient than with
conventional key word **searching** procedures. Assignment of subject
codes is **automatic** and can be carried out under computer control
without the need for human intervention. The usage of lexical database
enables the subject codes assignment to be **automatic** and efficient.
Text may be processed in reasonable amount of time. Enables **automatic**
classification of documents using subject codes having disambiguator,
which operates in heuristic and psycholinguistic manner, mimicking the
human disambiguation.
    DESCRIPTION OF DRAWING(S) – The drawing illustrates a flow chart
showing a system for subject field vector **generation** and document
classification and retrieval.

Abstract (Basic): WO 9841930 A
      The method is for **automatic generation** of a summary or
    synopsis from a text by computer. A probability is determined for each
    sentence or clause, that the sentence or clause belongs to the summary
    or **synopsis** , while for each word in the sentence out of a dictionary,
    that contains all the relevant words with a given measure of relevance
    to each of these words, the measure of relevance is determined and all
    the measures of relevance are then accumulated to yield the probability
    for the sentence belonging to the summary.
      The sentences of the text are then sorted by probability factors,
    and the best **matched** sentences are indicated, in correspondence to a
    given reduction measure, to the summary, in a sequence given by the
    text.
      USE - For selecting relevant and significant information form a
    mass of data e.g. in form of articles, and particularly in summarising
    various texts.
      ADVANTAGE - Provides summary or **synopsis** of text which **briefly**
    gives most important points/content of text.

TW 347516   A   G06F-009/06

Abstract (Basic): WO 9804982 A
        The method for browsing documents involves **automatically**
    identifying for a user, keyword phrases in the documents (110),
    prompting the user to construct a **query** expression in which at least
    one of the keyword phrases is an operand (120) and identifying one of
    the documents based on the **query** expression.
        The identified document is presented to the user in the form of an
    abstract (140,150), and identification of the keyword phrases and
    generation of the **abstract** are accomplished by linguistically
    analysing the documents (140). A user interface featuring a tabbed
    index into either keywords or key phrases in separately scrollable
    display areas provides indexing into the content of each screen area.
        USE - Browsing by prompted keywords with user interface, to
    identify documents by prompted keyword phrases.

Patent Details:
Patent No	Kind	Lan	Pg	Main IPC	Filing Notes
US 5493508	A		31	G06F-017/50	

Abstract (Basic): US 5493508 A
    The method involves establishing a desired behaviour for a complex
digital system. A formal specification for the complex digital system
is created using a formal directly-executable specification language.
    The following steps are iteratively performed. The syntactical
correctness of the formal specification is checked. The logical
consistency of the formal specification is checked. The completeness of
the formal specification is checked. The correctness of the formal
specification is checked. The desired behaviour is compared with the
behaviour described by the formal specification. The existence of at
least one realizable implementation of the formal specification is
determined. Any problems detected are corrected by revising the formal
specification. This is done until the formal specification is
syntactically correct, logically consistent, correct and complete,
reflects the desired behaviour, and has at least one realizable
implementation.
    ADVANTAGE - Allows work at high **abstraction** levels with large and
complex systems. **Automatically** translates behavioural circuit
descriptions into implementations. Raises level of design validation
from structural (net-list) to behavioural level. Provides standardised
environment reducing need for cross training between platforms and
directing resources to testability. Provides automated, interactive and
iterative technique for complex specification. Allows execution of
specification in automated fashion to give implementation. Coordinates
system and subsystem specifications with design implementations.
Ensures specification changes made are reflected and accounted for in
system wide fashion. Converges on feasible implementation. Allows user
to **query** properties of formal executable specification. Assists user
in understanding system properties and subsystem relationships. Allows
user to asses completeness of specification. Allows determination of
correctness of specification w.r.t. intended system properties.

Provides feedback of specification errors before propagated into system. Assists in elimination of ambiguities in specification.
        Dwg.2/18

	Designated States (Regional): DE FR GB				
DE 68928775	E			G06F-017/24	Based on patent EP 361464

Abstract (Basic): EP 361464 A
     The appts. allows 'hint' words to be selected from a dictionary (3)
    which will relate to significant phrases in a document held in a memory
    (2). The document is then **searched** for the sentences containing the
    hint words and the sentences are **abstracted** (4) and juxtaposed using
    the input (1), output (5) and control (6) sections to **produce** a
    suitable **abstract** .
     Where the number of hint words **produces** a lengthy document, a
    further processing step can be applied. This provides a logical
    structure storage (7) and analysis (8) which provides morphological
    analysis of the **abstracted** sentences and a modification unit (9)
    which together allow titles etc. to be eliminated, and a more relevant
    selection of sentences to be **abstracted** .
     USE/ADVANTAGE - Efficient **abstracting** of documents held on
    document retrieval system.

Patent Details:

Patent No	Kind	Lan	Pg	Main IPC	Filing Notes
CA 2446831	A1	E	38	G06F-015/16	Div ex application CA 2241767

Abstract (Basic): CA 2446831 A1
    NOVELTY - The system includes a systems interface that defines logical import and export **interfaces** , **data** transformation rule sets and scripts. A **metadata** database stores the interfaces, sets and scripts. A script processor (37) uses **metadata** (38) from the database to control data transformation within the systems interface and movement of the data into and out of the distribution system. A rule set processor (36) responds to the script processor to manipulate a data bag (35) to store imported data and a data bag for storing exported data.
    DETAILED DESCRIPTION - INDEPENDENT CLAIMS are also given for
    (1) a method of controlling data transformation within a distribution system, and
    (2) a computer readable memory for transforming and exchanging datastore data between heterogeneous computer systems.
    USE - For distributing data between heterogeneous computer systems.
    ADVANTAGE - Provides a simple mechanism to specify transformation definitions and to control the flow of data from an input source to an output target. Allows **dynamic** response to changing business environment. Non-intrusive to minimize effects of changing data formats or data storage types.
    DESCRIPTION OF DRAWING(S) - The drawing shows a block diagram of a system for transforming and exchanging data between heterogeneous distributed computing environments.
    Data bag (35)
    Rule set processor (36)
    Script processor (37)

Abstract (Basic): US 20020078014 A1
        NOVELTY - The primary document identified by the document address,
   is retrieved using computer executable logic. The links for the other
   documents provided in the primary document, is identified. The computer
   system identifies which of the identified links are lateral links to
   continuation documents of the primary document, by identifying whether
   any continuation document terms are associated with the links.
        DETAILED DESCRIPTION - INDEPENDENT CLAIMS are included for the
   following:
        (1) Continuation document identification system;
        (2) **Document   crawling** method; and
        (3) **Document   crawling** system.
        USE - For identifying continuation documents in website.
        ADVANTAGE - Continuation documents within a domain can be
   effectively identified and previously processed links can be easily
   determined.
        DESCRIPTION OF DRAWING(S) - The figure shows the hierarchical
   structure of the documents in the website.

With **Spidersoft** 's WebZIP, Web users can download Web pages and entire Web
sites for offline browsing. WebZIP captures images, sounds, and media files
to users' hard drives. The system streamlines browsing, and it lets surfers
store online content quickly. Files are saved in native HTML format,
letting users employ captured **links** . Original filenames and directory
structures also are saved. WebZIP can be extended with the FAR add-in tool,
which lets users convert downloaded Web content into compiled HTML-Help
files. The compressed files support full text searches, table of contents
panes, as well as index and favorites panes. WebZIP's Task Editor lets
users schedule content downloads and to specify the type of files to be
retrieved . Users can also define the comprehensiveness of downloads. The
system works with Microsoft Internet Explorer 4 or later.

PRODUCT NAME: DQbroker (002151)

Decision Support Inc (674168)
624 Matthews-Mint Hill Rd #150
Matthews, NC 28105 United States
TELEPHONE: (704) 845-1000

RECORD TYPE: Directory

CONTACT: Sales Department

DQbroker (R) is the foundation of Decision Support's suite of products,
which are enterprise data integration and extraction, transformation, and
loading (ETL) and Web-based reporting tools. DQbroker lets users find
needed data independent of database vendor, hardware platform, or location.
This gives users and developers simultaneous access to all available data

in **real time** . It enable[●]ovement of notably less data a[●]ss the
network when processing queries that join distributed data. [●]broker is
significantly more efficient and effective at accessing and joining
enterprise data than three-tiered, ODBC-based, and hub design solutions.
The basic installation and configuration of DQbroker can be accomplished in
less than an hour by any system administrator. It is easy. DQbroker has a
thin-client architecture that distributes the processing of queries as
close to the source data as possible. Queries that access and **join data**
from multiple heterogeneous data sources are processed on multiple servers
simultaneously. Only the data necessary to resolve the query crosses the
network. This differs from the fat-server, three-tier approach common in
the marketplace today, which requires entire datasets to move across the
network to be processed by a single hub server. DQbroker converts a single
SQL query that joins distributed data into multiple SQL queries. Each
subquery is targeted at a single data source. The subqueries contain as
much selection, filtering, joining, and sorting as possible. This allows
DQbroker to leverage the capabilities of each database management system
(DBMS), minimizing the amount of data returned and the time needed to
return it. The processing happens as efficiently as possible because
DQbroker communicates with all major relational database management systems
using native access routines. A global **metadata** cache enables every
DQbroker server to know the **current** state of all data in a distributed
domain. Caching **metadata** also makes the retrieval of database properties
faster. This accelerates query processing in a distributed environment
because DQbroker has all the information it needs to distribute subqueries.
DQvista works with DQ broker to provide enterprisewide reporting that
joins data sources.

PRODUCT NAMES: Ultraseek Server CCE 3.1 (742627)

TITLE: Any Document, Any Place, and a Place for Every Document
AUTHOR: Westmacott, Ian
SOURCE: Server/Workstation Expert,   v10 n12 p56(3) Dec 1999
HOMEPAGE: http://www.cpg.com

RECORD TYPE: Review
REVIEW TYPE: Review
GRADE: A

GO.com's Ultraseek Server, a document search engine and indexer, is
available with the Ultraseek Server CCE 3.1 add-on, an excellent choice for

users who need directory-s⬤ search abilities. Ultraseek ⬤er works
very well as a search engine for distributed text-based docu⬤nts.
Ultraseek Server provides English indexes and partial support for other
languages, a sophisticated query **interface** , an intelligent scanner, and a
customizable scripted results **interface** . Platforms supported include
Solaris, Linux, and Windows NT, and symmetric multiprocessing systems are
also supported. The server can index documents by **spidering** a network
(beginning with a specific URL, then tracing **links** found in follow- on
documents); scanning a local file system; scanning Usenet newsgroups;
scanning Web-accessible Microsoft Exchange public folders; or by mirroring
other Ultraseek Server indexes. Database content indexing is not supported.
Document types supported include HTML, XML, TRF, Word, Excel, PowerPoint,
FrameMaker, Portable Document Format (PDF), PostScript, WordPerfect, Lotus
1-2-3, WordPro, and Freelance Graphics. The scanner runs continually to
find and **retrieve** documents to be indexed; automatically removes deleted
documents from the index; and updates altered documents. Many other useful
features are described.

GRADE: Product Analysis, No Rating

Upshot Sales from UpShot Corporation, Actuate Reporting System from Actuate
Software Corporation, and Mainspan from Webridge are Web- based
administrative tools that bring new capabilities to sales, reporting, and
corporate communication. UpShot Sales has a browser- based **interface** that
lets team members in any location have universal access, allowing strategic
information to be disseminated throughout an organization. Its e-mail and
chat capabilities supports sales force collaboration. Actuate Reporting
System has been adapted to let organizations distribute reports to
managers, employees, and external partners via the Web, where an Actuate
Web   Agent tool transforms the program's output into a Web site with
individual URLs for specific reports and folders. Actuate will also
automatically push notices about new reports directly to targeted
individuals. Mainspan spans the knowledge gap that sometimes arises between
product manufacturers and key customers by letting vendors use the World
Wide Web as a distribution medium for a wide array of confidential
information, which will also accelerate the information distribution
process.

00116827   DOCUMENT TYPE: Review

PRODUCT NAMES: ISYS: spider **1.5 (752088**

TITLE: Spider **spins power searches**
AUTHOR: Rapoza, Jim

RECORD TYPE: Review
REVIEW TYPE: Review
GRADE: B

ISYS/Odyssey Development's ISYS: **Spider** 1.5 adds Web site searching to the
vendor's suite of corporate search tools. ISYS: **Spider** is an easy-to-use
agent that searches and indexes external World Wide Web sites, and when
used with Isys:Desktop and Isys:Web, it allows corporations to construct
and maintain indexes of documents stored on networks, company Web sites,
and particular external World Wide Web sites. ISYS: **Spider** gets good marks
for usability, performance, and manageability, while capability and
interpretability are rated average. **Spider** 's only features are the
ability to search sites and to index their contents, and it lacks some
features provided in competing search products, such as Plumtree Server and
others, which can scan many data repositories, including internal and
external databases. Such products as Netscape Communications' Compass
Server provide personalized searches that send back **links** based on users'
criteria. To **obtain** full-fledged Web support, testers installed Desktop,
then Web, then **Spider** . Creating and indexing document databases is easy,
but managing databases should be easier, since the tools do not ease tasks
required to search indexes of multiple sites concurrently. Unless the
manager **links** the indexes in advance, the Web searches them sequentially.

    Abstract: With the explosive growth of the World Wide Web, it is becoming
increasingly difficult for users to collect and analyze Web pages that are
relevant to a particular topic. To address this problem we are developing
WTMS, a system for Web topic management. In this paper we explain how the
WTMS crawler efficiently collects Web pages for a topic. We also introduce
the user interface of the system that integrates several techniques for
analyzing the collection. Moreover, we present the various views of the
interface that allow navigation through the information space. We highlight
several examples to show how the system enables the user to gain useful
insights about the collection. (Author abstract) 20 Refs.

Abstract: The main objective of the IBM Grand Central Station (GCS) project is to gather all types of information in any format (text, data, image, graphics, audio, video) from cyberspace, to process/index/summarize the information, and to push the right information to the right people. Because of the very large scale of cyberspace, parallel processing in both crawling/gathering and information processing is indispensable. We present a scalable method for collaborative Web crawling and information processing. The method includes an automatic cyberspace partitioner which is designed to balance and re-balance the load dynamically among processors. It can be used when all Web crawlers are located on a tightly coupled high-performance system as well as when they are scattered in a distributed environment. We implemented these algorithms in Java. ABSTRACT: Individual Inc's HeadsUp customized electronic news service provides subscribers with access to over 700 news sources, including articles, news items, press releases and other reports. Subscribers can create profiles that specify their particular interests, choosing items from a list of over 700 categories. HeadsUp utilizes a string of 486-based PCs and a software system called System for Manipulation and Retrieval of Text (SMART). SMART locates the items that best match the users' profiles. HeadsUp provides subscribers with two-sentence summaries of articles, from which subscribers can order the full text versions via a toll-free number. The articles are sent within a half hour via fax or E-mail. SMART scans through more than 10,000 articles per day and prioritizes them for each subscriber. Subscriptions cost $695 per year, which includes 160 full text records, or $29.95 per month, which includes one full text record.

M2 PRESSWIRE-12 January 1999-VERITY: Verity solution chosen by Xerox for
corporate intranet portal (C)1994-99 M2 COMMUNICATIONS LTD RDATE:110199 *
Verity to help Xerox index and **retrieve** documents on its corporate
intranet Verity, Inc. (Nasdaq: VRTY), today announced that Xerox
Corporation (NYSE: XRX) has chosen Verity's Information Server and Verity
Spider to help Xerox users index, search and navigate all of the documents
on Xeroxs corporate intranet. Verity's comprehensive solution is designed
to provide Xerox with a one-stop shopping intranet portal that allows
employees to search, **retrieve** , classify and disseminate business-critical
information from a singlesite. The Xerox portal incorporates the Verity
Information Server and Verity **Spider** products for advanced document
searching, indexing and retrieving. Verity's products, which will reside on
Xeroxs corporate communication site. are designed to enable Xerox users to
conduct comprehensive searches of the company's global intranet. "We chose
Verity because its products enable us to deliver an intranet portal to
enhance our current knowledge management capabilities, providing the means
to centrally locate information from more than eight thousand intranet Web
sites distributed globally." said Christopher Noyes, manager of Internet
services for Xerox Corporation. "Today Verity's search engine is embedded
in our DocuShare product which we believe will provide a solid foundation
for a corporate-wide standard searching capability in the future." In
addition to technology, Verity is providing on-site consulting services to
Xerox to ensure the portal's successful deployment. "We view the intranet
portal as the second generation Of the Internet because it allows
organisations to gain better control of unmanaged information," said
Anthony Bettencourt, senior vice president of worldwide sales and product
marketing at Verity, Inc. "We are pleased to be working with Xerox to help
the company not only index and **retrieve** its large number of documents,
but also to provide a single search engine that in the long-term can offer
multi-lingual support and a consistent **interface** for users to gain access
to mission- critical information residing on the Xerox corporate intranet."
Verity Information Server and Verity **Spider** Prove Capabilities Beyond
Basic Search Verity Information Server and Verity **Spider** enable
organisations to turn corporate intranets into powerful knowledge bases,
making business information accessible and reusable across the enterprise.
Used together, the products offer businesses a comprehensive and integrated
solution, providing information in context. With capabilities far beyond
basic search and retrieval Verity's enhanced products address the key

problems of corporate knowledge retrieval and content management,
including: * Automated document classification, profiling and tagging,
based on matching documents to the key concepts relevant to individual
business organisations * Full text and **metadata** indexing * Search and
retrieval (retrospective search) Easy to install and use, Verity
Information Server includes support for the latest versions of commercial
Web servers, including Netscape NES 3.51 and Microsoft IIS 4.0, and support
for future Web servers from market leaders. Verity **Spider** offers
organisations advanced indexing capabilities, handling documents with less
interruption than its competitors. Today, organisations use both products
to improve knowledge-intensive business operations in such areas as
customer care, business intelligence, marketing, financial analysis,
project management, e-commerce and on-line publishing. About Xerox Xerox
corporation (NYSE: XRX) is the global leader in the document processing
business, providing the widest array of products and consulting services in
the industry. Xerox markets its publishing systems, copiers, printers,
scanners, fax machines and document management software in more than 130
countries. Xerox products and services are designed to help customers share
their knowledge and master the flow of information from paper to electronic
form and back again. About Verity Verity is a leading provider of
enterprise knowledge retrieval solutions for corporate intranets, online
publishers, e-commerce vendors and market-leading OEMs and ISIS. Verity's
product suite enables organisations to turn corporate intranets into a
powerful knowledge base by creating corporate portals, making business
information accessible and reusable across the enterprise. Verity's
leadership has been recognised by numerous organisations, most recently by
Delphi Consulting, which gave Verity the Market Recognition Award based on
a survey of 600 corporate users. Verity's comprehensive and integrated
product family enables enterprise-wide document indexing, classification,
search and retrieval, personalised information dissemination, and hybrid
online and CD publishing - all from the same underlying Verity collection.
Verity's KeyView products also enable viewing of source documents stored in
more than 225 formats. Verity's, products are used by more than 1,000
corporations, government agencies, e-commerce sites, on-line service
providers, Internet publishers and software developers worldwide. Verity
alliances include Adobe Systems, AT&T, CNET, Cisco, Compaq, Dow Jones,
Ernst & Young, Financial Times, IBM, MD Consult, NewsEdge Corporation,
Informix, Lotus, NEC, Netscape Communications, SAP, Siemens Nixdorf,
Sybase, Tandem and Time Warner's Pathfinder. This press release contains
forward-looking statements relating to Verity and the expected performance
of Verity Information Server and Verity **Spider** products. as well as
integration of its products into Xerox and customer environments. Other
risks relating to Verity and its products are as set forth in its Form 10-K
and Form 10-Qs as filed with the Securities and Exchange Commission.

Taming of the Web

ABSTRACT:
ICONOVEX of Bloomington, MN, has come out with Anchorpage, a computer
software that makes Web sites more user-friendly. Anchorpage allows Web
site users to utilize key content and key phrases in searching the Web.
Through ICONOVEX's new **product** , users can also compose **presentation**
views, **abstract** views, phrase views and table of contents views. By
selecting which views will be shown to web site users, web site
administrators make searching easier for the users. Anchorpage also
automatically searches databases and composes the views, eliminating the
need for the site administrator to compose web navigation guides manually.
